Electronic Arts VE is presently undergoing a massive overhaul and is currently undergoing a massive overhaul of everything from the servers to the client. Many people that initially played the game have already been informed that the game would no longer be updating. Today however, further information came in an EA Forums post which informed players that the servers for the game have been taken offline. "Starting today, the servers for Battlefield: Bad Company 2 have been taken offline. This is due to an issue with the servers impacting additional server functionality. All players will be able to access their game content on any of their last known EA servers. We are working hard to get Battlefield: Bad Company 2 servers back online and will have updates for players once it is complete. In the meantime, keep your eyes on the EA Forums where we will have any additional information on this issue." Today is also the day the Social SDK has been released for EA, EA's personal dashboard for social networks. They plan on updating all four major networks by the end of today, and are looking to add Facebook and LinkedIn later on this week. This is not the first time EA has taken their multiplayer community offline, last year they launched The Taken King for Battlefield 3, and just this morning removed all Battlefield 3 betas for PC. What is Skalc? Skalc is a skinnable replacement for the standard Windows calculator. It's designed to be simple and let you focus on skinning while you do all the actual calculation. Skalc can parse and load skin.xml files that defines the skins (and displays) for Skalc. These files are in the same format as SkinnableWindows and SkinnableMac OS X skin.sk files. To run Skalc, simply double-click the Skalc.exe file. Skalc will do the rest. Skins Unlike SkinnableWindows and SkinnableMac OS X, Skalc supports more sophisticated skins, allowing for complex and varied user experience. Skalc includes basic skins to make skinning easier, but you can download other skins from Skalc has a nice little help dialog that comes up when you press F1 or the? key. The help dialog is generated from the XML. It also contains a link to the official Skalc documentation. I downloaded this program hoping to use it as my calculator but when I double click it nothing shows up and I can't figure out where to get skins. A: First you have to download this skins folder on the internet. Then you have to run the program with administrative rights and then go to the browse for files, and make a new shortcut. Paste this path to the applications path in this field: Q: creating a simple multiprocessing script in python Basically I have the following script. What it does: it asks you a question, reads the answer and then do whatever. In reality the output of the program prints instead of returning to the script. So the user has to manually stop the script by pressing Ctrl+C. If i run it on my computer it works well but on others it doesnt.
